

Artificial Intelligence: A Complete Introduction

One Day Classroom Training

Demistify the world of modern Artificial Intelligence and Machine Learning

Course Overview

This course is ideal for Business and IT professionals who need to understand Artificial Intelligence and related concepts in order to describe the business case for workplace digitisation and automation of repetitive, high-volume, tasks.

Course Includes

You will receive a workbook containing key concepts on each topic covered and hands-on activities to reinforce the knowledge attained. It also includes a digital student resources folder to support the hands-on activities.

Course Outline

- Introduction to Workplace Digitisation & Automation concepts
- The Business Case for Workplace Digitisation & Automation
- The workflow that supports Digitisation & Automation
- The disciplines that support Digitisation & Automation
- The Azure toolset that support Digitisation & Automation

At the end of this course, you will be able to:

- Describe Workplace Digitisation & Automation concepts
- Describe The Internet of Things (IoT)
- Describe Big Data
- Describe the relationship between IoT and Big Data
- Describe Business Case for Workplace Digitisation & Automation
- Define Artificial Intelligence (AI)
- Define Machine Learning (ML)
- Describe the role of ML for Predictive Data Analytics
- Illustrate the ML Life Cycle
- Describe the workflow that supports Digitisation & Automation
- Describe the disciplines that support Digitisation & Automation
- Describe the Azure toolset that supports Digitisation & Automation
- Define model in the context of ML
- Describe a range of ML models
- Describe a range of practical uses for ML
